Spirocom VPU

Effective from 23rd of February, 2024, the VPU (Voice Projection Unit) function has been removed from the Spirocom communication system.

Certification testing has revealed that VPU tests have not passed the expected levels/values. The affected model's part number is 34320-1000C.

If you have been supplied with the affected Spirocom unit after 23rd of February, 2024, create a Warranty Case to get the function disabled. Visit "<https://interspiro.com/en-gb/service-support/case-registration>" to file your case.

The mechanical speech diaphragm provides voice projection that is virtually at the same level as the VPU, making the VPU function largely redundant.

Furthermore, the removal of the VPU functions achieves the following overall product benefits:

- Priority of the core communication features Push-to-Talk (PTT) and Team Talk
- Reduction of feedback and environmental noise, resulting in better sound clarity.
- Longer operational time with no battery power consumption from the VPU.
- The unit becomes easier to operate and the risk of accidental VPU activation is eliminated.
